ARC Training Centre for Transforming Maintenance through Data Science

The Centre is a partnership that uses data science to transform maintenance and its workforce.

The Centre will do this by eliminating manual, repetitive transactional work; developing models to enable people to make better complex decisions; providing standardized training for industry to improve maintenance productivity; and building an ongoing maintenance capability in our research institutions and industry.

Research Themes

The Centre will focus on the three key roles in a new digitally-driven maintenance management system.

Theme 1: Support the Maint<mark>ainer</mark>

Theme 2: Support the Engineer

Theme 3: Support the Manager

Translation Themes

These themes are vital as a mechanism to translate the outputs of the research themes into the workplaces of our Partner Organisations and to enable maintenance data science and technology service providers

Theme 4: Support the Organisation

Theme 5: Generic Software Architecture
