Dr Michael Stewart

Research Fellow

Theme 1

2020-06-25

UWA Research Bytes Series - Webinar

The purpose of the presentation was to present our research on technical language processing to the community in order to demonstrate its significance and garner interest in our work. I introduced and promoted the CTMTDS and provided an overview of the work currently underway in Theme 1 on unlocking maintenance work orders.

During the presentation I made reference to two projects:

- Maintenance Work Order Annotation Gold Standard Test set
- Redcoat - a collaborative text annotation tool
