Improving how engineers communicate - with computers

The Shoe Bar, Shop GSO7 Yagan Square, 376 - 420 Wellington St, Perth

Imagine a doctor giving you a diagnosis without even looking at your medical records. This happens all the time in maintenance as the information about equipment history is stored as unstructured texts. Professor Melinda Hodkiewicz is a maintenance engineer, working with computer scientists, on a mission to make these texts machine readable so they can be used to make better decisions about our engineering assets. Come and discover why to do this isn't as simple as running the texts through the latest AI algorithm.

Prof Melinda Hodkiewicz
