Unlocking the Potential of Data Science: Developing an Assessment Tool for Organisational Capability

Virtual - Researchers Catch-up host online from Curtin University

Have you ever considered how your organisation can fully unlock the potential of data science and stay ahead of the competition?
Have you ever questioned the effectiveness of cross-team and multi-disciplinary collaborations in sharing and utilising data in your organisation?
Have you ever reflected on the skills your employees will need to work alongside these new data science solutions?
Translation Theme 4 aims to support you in understanding how your organisation can ensure that you have the capability and workplace practices to fully utilise Data Science innovations. Eden Li is developing an assessment tool that will inform the capabilities of an organisation to recognise, adapt, and implement data science innovations.
Eden's presentation will cover the assessment tool's development, its various capability components, and how implementing it can provide valuable insights and benefits for your organisation.

Dr Keyao Li
